

Company Profile

About Us

Iraqi Italian aluminum company – IIALCO is a company based in Erbil-Iraq established in 2013, and its part of Dijla Group which is a branch of Dijla aluminum company- Baghdad, we are In the construction solutions business helping the main contracting companies, owners or investors with our services.

Our Mission

Our business is providing and delivering high quality standard using up-to-date methods and procedures and high quality materials. Our goal is full satisfaction of our construction industry customers.

Our Vision

To be the first choice of our construction industry clients for the high quality, best design and durability Aluminum solution for any type of buildings.

Our Team

We call it "team", team is the principle that we believe in, and all our labors are trained work as one hand doing the job to reach the best result. Our professional team have the keys of technical know how and the objective of fullfiing all the requirements and needs required by clients. This is done in an open way while they are on the site. Meeting the deadlines of the projects and matching their schedule according to the site performance in order to do the job without any delays for the project. They are trained to get maximum customer satisfaction.

How We Do It?

Before starting the project, we meet the clients to understand all the project requirements and the purpose of the building(s) of the project. We may suggest some of the materials that will be helpful for the project. and then we start by following the projects specifications under supervision of the site engineers and the consultant. Moreover, we use Italian brands for the aluminum and accessories according to the design and consultant specification. We submit a full data sheet, technical information and catalogues to consultant to approve the materials before we start.

The advantages of choosing the aluminum for an aesthetically and practical material

Why choosing Aluminum?

- **Light and Solid:** it is the idea choice for facades and areas of large dimensions.
- **Extremely resistant and durable:** it does not corrode or deteriorate and has an extremely long-life cycle.
- **Practical and easy to maintain:** it requires a very low level of maintenance, only needing to be occasionally cleaned.
- **Completely eco-friendly:** it is in no way harmful to the environment and is 100% recyclable.
- **Can be shaped as required:** it is extremely malleable and can meet all design requirements including dimensions and colors.
- **Idea in the field of architecture:** Architectural designs can often be greatly enhanced by aluminum finishings.

Our Products

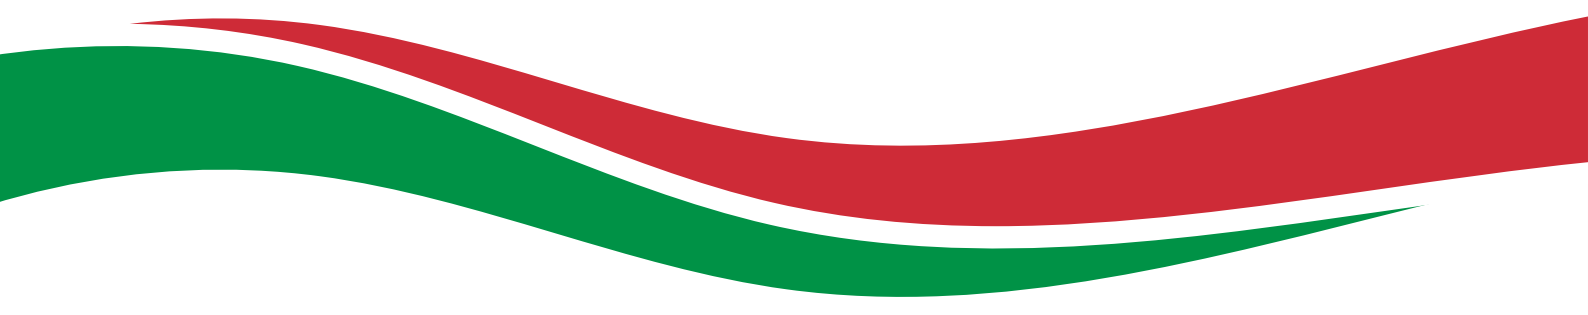

Sliding System

It is possibly making the doors and windows with a sliding system, this system is made up to 2 sash, and it can slip or slide each other in opposite way when you open them. It consists of two sash one in the front and the other at the back and this type of windows does not obsession space of the room, but you can open only the half of the window. Also, there is 4 or 3 sash design, using double glazed glass thickness of 21 mm and can add fly screen.

Hinges Windows

Using hinges windows in all types of buildings and there are several types of them, such as individual with one wing, the double wing according to the design, ventilation window opens from the top, or the Tilt and Turn which is a combination between the hing and the ventilation window where it is possible to open a two-way. Most of the windows open in one destination within the 90 degree or less depending on the design, using double glazed 21mm thickness.

Hinges Doors

Can make the doors or gates for rooms and bathrooms and gates for the entrances of homes or buildings, and may be single or double doors in one way direction of opening either inside or outside of 90 degree. Also possible add a decorative fix parts according to the amount of space with several decorative design with the use of double-glazed glass of 21 mm thickness.

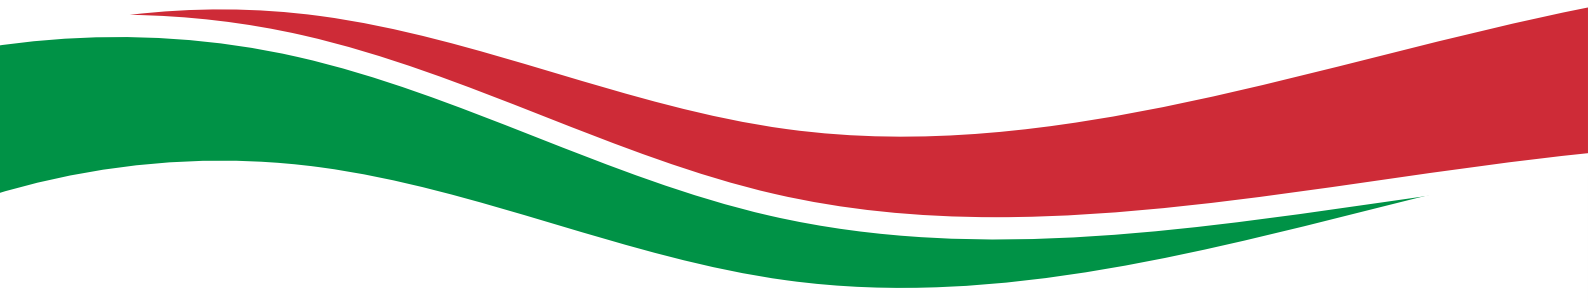

Fixed Windows & Partition

Using Fix Frames system which cannot be open, for the purpose of lighting or to fill the decorative opening design of the building, and it can be designed in a decorative way. Moreover, the fixing system can be used to divide the open space as partitions for rooms or any partition according to the site and design, using double glazed 21mm thickness or single glass thickness of 6 to 10 mm.

Curtain Wall System

Is an external cladding of the building, which is without structural elevation, where isolating the building users from external climatic conditions. Since this type of walls is not structural, it can be made from lightweight materials and reduce construction costs. The advantage of this curtain wall system is using the glass, allowing natural light to penetrate deeper inside the building with good looking outer elevation. It can be adding aluminum cladding to implement the special design with different colors.
